

H5

1.  $P =$  stage 1 stage 2 stage 3  $\leftarrow$  current state

stage 1	$\begin{pmatrix} 0.5 & 0.3 & 0 \\ 0.4 & 0.5 & 0.5 \\ 0.1 & 0.2 & 0.5 \end{pmatrix}$	
stage 2		
stage 3		

$\uparrow$   
 next state

$$P_{12}^{(2)} = 0.5 \times 0.4 + 0.4 \times 0.5 + 0.1 \times 0.5$$

$$= 0.2 + 0.2 + 0.05$$

$$= 0.45 = 45\%$$

3.  $A = RAR^{-1}$

$$A^n = (RAR^{-1})^n$$

$$A^n = RA^n R^{-1}$$

$$A = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 0.0697 & 0 \\ 0 & 0 & 0.4304 \end{bmatrix}$$

$$A^n = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 0.0697^n & 0 \\ 0 & 0 & 0.4304^n \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} \text{ for initial}$$

$$A^n = \begin{bmatrix} -0.4699 & -0.5551 & -0.7801 \\ -0.7832 & 0.7961 & 0.1813 \\ -0.4072 & -0.241 & 0.5988 \end{bmatrix} \begin{bmatrix} 1 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} -0.4699 & -0.5551 & -0.7801 \\ -0.7832 & 0.7961 & 0.1813 \\ -0.4072 & -0.241 & 0.5988 \end{bmatrix}$$

$$= \begin{bmatrix} 0.28302 & 0.2602 & 0.28302 \\ 0.47172 & 0.47172 & 0.47172 \\ 0.24526 & 0.24526 & 0.24526 \end{bmatrix}$$

Thus  $P_1 = 0.28302$

$P_2 = 0.47172$

$P_3 = 0.24526$
