Course: STMATH 381

Name: Lu Lu

Date: May 22nd, 2019

Subject: P4 Proposal

For Project 4, I want to challenge the Markov Chain in Corona Virus. We are all effected by Corona Virus and I want to use the Markov chain to calculate the possibility of ratios in getting affected and cured over time.

The challenge of this project is that I must do a lot of research on the data for the Corona Virus and get understanding of it. Try to develop a scientific solution on the possibility in decreasing the death by Corona Virus. No one have done this before, and it is going to huge challenge because of lack of directions. If possible, I wish to get some advice on this topic.
